

RD-JEPA v2 — Recurrent Deliberation JEPA

Spatial latent $[B, 64, 4, 4]$ · divergence-projection lens (Navier–Stokes masking) · energy + contrastive anti-collapse · curriculum K · async probing decoder

Inside the Lens — one refinement step $F_\theta(h_{k-1}) \rightarrow h_k$

Additive phase = advection · subtractive phase = CFD incompressibility projection (redistribute density, never zero) · K_{epoch} ramps $K_{\text{min}} \rightarrow K_{\text{max}}$ over warmup · VRAM constant in K via weight sharing + gradient checkpointing
